5. Application information

Application circuit

Self-check Function

Set the CHK pin to high status. STK-x.xP/Mx-x will run in self-test mode, check the out pin, equivalent to the status I_p is I_{ok} , at this time the output has equivalent voltage, the detector is OK. Then sets CHK to low voltage $V_{CD} < 0.2V$, the sensor starts to run in the residual current.
